Call for Papers - Special theme on: Advances in Building Information Modeling (BIM) for Construction Projects

1. Introduction

The competitive global business environment calls for the deployment of various levels of strategies and technologies on enterprise and their projects. The successful delivery of large-scale construction projects require significant planning, design, construction and project management efforts. Building Information Modeling (BIM) is an enabling technology and the processes which can significantly transform the project delivery process and add value across the whole project lifecycle.

Nowadays, the technology side of BIM is becoming more popular and mature in different sectors of the construction industry. However, the proper understanding of change in business processes and practices that come with BIM implementation, along with the project management aspect of BIM, is still a young area of academic inquiry.

Without the proper studies of the associated project management processes and managerial side of BIM, the successful adoption of BIM on projects, particularly on large-scale and capital intensive projects is going to be extremely challenging. In this regard, this special issue focusing on project management of large-scale construction projects in relation to BIM is timely and critical to coordinate and manage overall project information, processes and aligning project and organizational strategies for improved project performance throughout the entire lifecycle of a project. This 'soft' area of BIM research is rather new but has a huge potential to impact on the overall management of projects. Even a small improvement in any of the project management processes can make a huge difference on overall cost, time, quality and sustainability of projects.

This special theme on International Journal of Project Management (IJPM) is aimed at addressing the above-mentioned agenda by incorporating BIM in the management of large-scale projects. We invite scholars to submit innovative and thoughtful research on BIM case studies, real world organizational and project issues and best practices that have significant contributions on theory building or the practice of project management on large scale projects/megaprojects.

2. Scope

Examples of a range of BIM-related topics for this special issue include, but are not limited to:

- Project management
- Contractual arrangements
- Information management and integrations
- Strategic management
- Communication and coordination
- Innovative procurement methods based on BIM
- Decision making
- Dispute resolution
- Productivity studies
- Performance measurement and effectiveness
- Relationship management
- Sustainability
- Lifecycle management
- Culture and union studies
- Modular construction
- Global information sharing in international construction
- Construction Innovation

3. Submission process

Authors are kindly asked to first submit a 1000-word abstract. Please submit abstracts directly to the guest editor at mauro.mancini@polimi.it. The editors will invite papers based on the abstracts. Papers must be submitted online at http://ees.elsevier.com/jpma carefully following the Guide for Authors. Submitted papers will be subject to the usual IJPM double-blind review process with multiple reviewers. All queries should be submitted directly to the guest editor.

E-mail addresses: Xiangyu.Wang@curtin.edu.au (X. Wang), mauro.mancini@polimi.it (M. Mancini), rm.skitmore@qut.edu.au (M. Skitmore), Raymond-issa@ufl.edu (R. Issa).

http://dx.doi.org/10.1016/j.ijproman.2014.08.001

4. Timeline

- Abstract submission deadline: 1 June 2015
- Paper submission deadline: 1 October 2015
- Notifications to authors: 1 January 2016
- Expected publication date: 1 July 2016

Mauro Mancini
Guest Editor
Department of Management Economics and Industrial Engineering Politecnico di Milano - Italy
E-mail address: Mauro.Mancini@polimi.it.

Xiangyu Wang
Guest Editor
Australasian Joint Research Centre for Building Information Modelling Curtin University, Australia
E-mail address: Xiangyu.Wang@curtin.edu.au.

Martin Skitmore
Guest Editor
Science and Engineering Faculty Queensland University of Technology, Australia
E-mail address: rm.skitmore@qut.edu.au.

Raymond Issa
Guest Editor
Rinker School of Building Construction University of Florida, Florida
E-mail address: Raymond-issa@ufl.edu.
